JSTOR is a digital library of academic journals, books, and primary source objects. JSTOR helps people discover, use, and build upon a wide range of content through a powerful research and teaching platform, and preserves this content for future generations. JSTOR is part of ITHAKA, a not-for-profit organization that also includes Ithaka S+R and Portico. For more information about JSTOR, please contact support@jstor.org.

harbor on the afternoon of July 23. On inspection, the Cuban quarantine officer detected 6 new cases of malarial fever on board, of which 1 showed jaundice, and ordered them all to the city hospital for observation and treatment. On July 27 every patient was feeling well and they were all ordered to rejoin their vessel. In the afternoon of the same day, before the cases from the hospital had reached the vessel, I went on board and took the temperature of the rest of the crew. I found 3 other cases showing temperatures above normal, making a total of 14 cases since the vessel was at Panama. On inquiry, I was informed that cases had developed in every living quarter of the vessel, and that mosquitoes were noticed on board. In view of the fact that malarial infection prevailed aboard, a complete refumigation of the whole vessel was made under my direction and supervision. The vessel cleared for New York via Habana July 27, and the facts connected with these cases, as also the refumigation, were noted on the bill of health.

August 4. One yellow fever, isolated, civil hospital, this city, reported to-day. Case transferred from rural town of Mocha, within this district.

August 6. Yellow-fever case died this afternoon. Case stayed 24 hours Hotel Europa, centrally located, this city, on fourth day of disease, before taken to hospital. Presumed infection carried from Union de Reyes to Mocha.

History of yellow-fever case.—History of case yellow fever reported Matanzas yesterday as follows: Spaniard, two years in island; had been working at Mocha; sickened July 28; confirmed August 4; died August 5.
